## SUMMARY

Entry-level AI/Software Engineer with hands-on experience building **Retrieval-Augmented Generation (RAG)** and LLM-powered applications using the **Google Gemini API**, alongside production-ready web applications in **React.js, Python, and Flask**. Comfortable across the stack, from REST API design to cloud deployment on **GCP**, with strong fundamentals in Data Structures & Algorithms, System Design, and Agile workflows. Eager to apply and grow AI/ML engineering skills in a collaborative, fast-paced team.

## EDUCATION

**Shree Venkateshwara Hi-Tech Engineering College** 2023 – 2027  
*B.Tech – Artificial Intelligence & Data Science, Final Year, CGPA: 7.7 / 10*

**Government Boys Higher Secondary School, Kambainallur, Dharmapuri** 2022 – 2023  
*HSC (12th) – 63%*

## TECHNICAL SKILLS

- **Languages:** Python, JavaScript (ES6+), HTML5, CSS3
- **Frontend:** React.js, Tailwind CSS, Responsive Web Design
- **Backend:** Flask, REST API Design, Microservices (Basic), Node.js
- **AI / ML:** **Google Gemini API**, **RAG Pipelines**, Vector Search & Embeddings, scikit-learn, Pandas
- **Database:** MySQL, MongoDB, Firebase Firestore, SQLite
- **Cloud & DevOps:** **GCP** (Firebase Hosting, Cloud Functions, Firestore), Docker (Basic), Git, GitHub, Postman
- **Concepts:** System Design (Basic), Data Structures & Algorithms, Agile, CI/CD (Basic)

## EXPERIENCE

**TCS Foundation – NIT Trichy** Jun 2026 – Jul 2026  
*SDE Intern Tiruchirappalli, Tamil Nadu (On-site)*

- Built **microservices** for an **AI-powered agricultural e-commerce platform**, covering product catalog, order management, and real-time delivery tracking across interconnected apps.
- Designed **system architecture** and **RESTful APIs** connecting farmer-facing, marketplace, and delivery services, improving data consistency across the stack.
- Wrote production-quality code and fixed critical bugs in a fast-paced agile environment over a one-month cycle.

## PROJECTS

**RAG Document Assistant** [GitHub](#)  
*Python, Flask, Google Gemini API, React.js, GCP*

- Architected a full-stack **Retrieval-Augmented Generation (RAG)** pipeline with a Flask REST API backend and React.js frontend, enabling intelligent, context-aware document Q&A via the **Google Gemini API**.
- Implemented document chunking and **text embeddings** for semantic search, improving retrieval accuracy and reducing LLM hallucination in responses.
- Deployed on **GCP Firebase Hosting** with Cloud Functions, building a scalable **serverless architecture** capable of handling concurrent user sessions with minimal latency.

**Full Stack E-Commerce Platform** [GitHub](#)  
*React.js, Flask, MySQL, REST API, Firebase Auth, GCP*

- Built a **production-ready e-commerce platform** with React.js featuring a dynamic product catalog, cart management, star rating & review system, wishlist, and a fully responsive mobile-first UI.
- Designed a RESTful Flask backend with **MySQL**, implementing optimized SQL queries with indexing for product search, filtering, and order management across **10,000+ product records**.
- Integrated **Firebase Authentication** (OAuth2 / JWT) for secure user login and Firestore for real-time cart sync; deployed end-to-end on GCP with a **GitHub Actions CI/CD** pipeline.

## HACKATHONS & ACHIEVEMENTS

- **First Place** – Agriculture Track, AI For All Ideathon, TATA Centre for AI & ML, NIT Trichy – Team “Code Crafters” built an AI-driven agricultural solution. (Feb 2026)
- National Level Hackathon Participant, Shree Devi Institute of Technology, Bangalore – E-Commerce stream. (2025)
